CONCEPTS & DEFINITIONS

Premises:

Premises has been defined as a building along with the land and/or common places attached to it. A premises may not always have a compound wall or fencing. In such cases, the land or the common place as the case may be, available to the household is treated as 'Premises'.

Building:

A 'building' is generally a single structure on the ground. Usually a building will have four walls and a roof. However, in some areas, the very nature of construction of building is such that there are no walls as in the case of conical structures. Such conical structures are also treated as buildings. Sometimes, it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, schools, places of entertainment, places of worship, godowns, stores, etc. It is also possible that buildings which have component units are used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence, residence-cum-doctor's clinic etc.

Census House:

A 'Census house' is a building or part of a building used or recognized as a separate unit because it has a separate main entrance from the road or common courtyard or staircase etc. These may be occupied or vacant and may be used for residential or non-residential purposes or both.

Household:

A 'household' in Census is defined as a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevents any of them from doing so. The persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a Census house but do not take their meals from the common kitchen, they are not considered a part of a common household. Each such person is treated as a separate household.

Availability and type of latrine within the premises:

Two questions were canvassed during Houselisting & Housing Census, 2011 to ascertain the availability and type of latrine within the premises. The first question related to whether latrine facility was available within the premises. Based on the response to this question, the appropriate codes for the 'type of latrine' was recorded. The set of codes used during Census 2011 are given below:

Type of Latrine facility	Code	Type of Latrine facility	Code
Flush/pour flush latrine connected to Piped sewer system	1	Night soil disposed into open drain	6
Septic tank	2	Service Latrine	
Other system	3	Night soil removed by human	7
		Night soil serviced by animals	8
Pit Latrine		No latrine within premises	
With slab/Ventilated Improved Pit	4	Public Latrine	9
Without slab/open pit	5	Open	0

If the pour flush latrine was connected to a system of sewer pipes that collected both human excreta and wastewater and removed them from the household environment Code '1' was recorded. Sewerage system consisted of facilities for collection, pumping, treating and disposing of human excreta and wastewater. This system is usually underground and is maintained by the public authorities. If the pour flush latrine was connected to a septic tank that collected both human excreta and wastewater and removed them from the household environment Code '2' was recorded. Septic tank refers to a system for excreta collection consisting of a water-tight settling tank normally located underground, away from the house. These Septic tanks undergo cleaning periodically (usually after a few years) either manually or by machines. If the flush/pour flush latrine was connected to any system other than Piped sewer system or Septic tank, e.g., excreta flushed to the street, yard/plot, drainage ditch or other location, it was given Code '3'.

Defecation into pits dug into the ground for the reception of night soil directly without flushing were reckoned as pit latrines. A pit latrine with a squatting slab or platform or seat firmly supported on all sides which was raised above the surrounding ground level to prevent surface water from entering the pit and easy to clean was recorded as 'Pit latrine with Slab'. Such pit latrines were some times ventilated by a pipe extending above the latrine roof and the open end of the vent pipe was covered with mesh or fly-proof net. This was referred to as Ventilated Improved Pit latrine. 'Code 4' was recorded for both these types of latrines. A pit latrine without a squatting slab or platform or seat was given Code '5'.

In some parts of the country there is facility of a latrine within the premises but the waste material is disposed directly into the open drain. Code '6' was recorded for these types of latrines.

In many parts of the country, the human excreta is collected in a bucket or other container or even allowed to collect in the open and is removed physically by human beings or animals. In case it was removed by human beings, Code '7' was recorded and in case it was serviced by animals, Code '8' was recorded.

Data was collected separately for the households using public latrine (Code '9') and defecating in the open areas such as open fields, bush, river, stream, railway tracks, etc. (Code '0').
