

FAECAL SLUDGE AND SEPTAGE MANAGEMENT PRIORITY OF INDIAN CITIES

📅 22nd June, 2020 ⌚ 3pm to 4 pm

India made significant progress in ending open defecation under the Swachh Bharat Mission in the last five years. This has ensured that behaviour change in favour of building and using toilets is now mainstreamed in both rural and urban India. Safe containment, conveyance and treatment of faecal sludge is an emerging priority.

Decentralized and non-sewer sanitation solutions are seen as both resilient in terms of their ability to withstand shocks as well as inclusive in terms of their reach to providing sanitation services to the peri urban or poor settlements across a city.

In the last three years, since the National Faecal Sludge and Septage Management Policy(2017), several states and cities of India have made good progress in addressing this challenge. Putting in place a range of technology options, contracting mechanisms, operations, and community engagement. This webinar will provide a peek into what was done, and how others can learn from the rich experience of these states and cities.

SPEAKERS

Mr. Kunal Kumar, IAS

Jt Secy, Smart Cities Mission MoHUA

Mr. G Mathi Vathanan, IAS

Principal Secretary, Odisha

Prof. S Chary

ASCI, Hyderabad

Ms. Kavita Wankhade

IIHS, Bengaluru

MODERATOR

Depinder Kapur

Senior Domain Expert & Team Lead, NIUA
